PROJECTS

E-Learning website

A platform which provides courses that users can learn online. Users can create an account by registering using their mail and set password. By logging in using their credentials they can choose courses and learn them by paying online. It also provides an additional field having tricks and tips to ensure that learners won't lose their interest during the course span.

Tech: Python Django

Medical delivery app

An android app which allows users to get consultation from doctors online. Users can create a profile and choose a consultation timing from the available timings provided by doctor. Also they can buy medicines according to prescriptions from medical shops registered in the website. The admin section and shop login is on the web and User, doctor are on android side. Admin can add/remove medical shops, manage users and get user feedback and provide user support.

Tech: Python flask for admin section and medical shops and JAVA
for android app.
